5×5 TELECOM
INTERNET, CYBER, EDGE AI & MANAGED SERVICES

Solution brief · Managed cybersecurity

Managed cybersecurity services

Cybersecurity from the team that already runs your network: firewall, network and Wi-Fi security, patching and phishing training, with 24/7 support.

Why businesses choose 5x5

Protection where your network meets the outside world

Your managed firewall sits at the edge of your network, where it meets the internet, so traffic coming in and going out is checked and controlled.

Watched by the team that runs your network

Our NOC, run by 5x5 network operations technicians, watches the networks we manage and acts on alerts. Support is available 24/7.

Tested for weak points

5x5 performs vulnerability and penetration testing to find gaps first, scoped in your service agreement.

What we provide

Network and devices

- Managed firewall and router
- DDoS protection and web and DNS filtering
- Antivirus, malware and ransomware protection
- Endpoint monitoring and patch management

People and accounts

- Phishing and social engineering protection and training
- Email security and dark web monitoring
- Multi-factor authentication and business password manager

Monitoring, buildings and compliance

- Network monitoring by our NOC, with 24/7 support
- Backup and recovery
- Access control, AI security cameras and leak detection
- Help meeting HIPAA, PCI DSS, SOC 2 and cyber insurance requirements

How it works

Free security consultation

We look at your current setup, ask a few screening questions and share general recommendations.

Agree on the scope

We list the systems, devices and protections we will manage in your service agreement.

Watched and supported

We put protection in place, then watch the networks we manage and act on alerts, with 24/7 support.

Book a free security consultation

We look at your current setup, ask a few screening questions and share general recommendations. Testing and hands-on work are scoped in the plan we propose.
