5×5 TELECOM
INTERNET, CYBER, EDGE AI & MANAGED SERVICES

Solution brief · Edge AI and private AI

Edge AI and private AI for business

5x5 Telecom runs AI models where it suits your business: at your site, in 5x5's space in your building or in a data center, on our hardware or yours. The models run on your private network, so responses come back fast and company data stays under your control.

Private AI, close to where you work

Company data stays private

Models run on your private network instead of a public AI service, so prompts, files and answers stay under your control.

Where it suits you

At your site, in 5x5's space in your building or in a data center, on 5x5 hardware or hardware you own.

Set up, secured and managed

We set up, secure, monitor and manage the systems behind your AI, as specified in your service agreement.

What we provide

AI and computing

- Edge AI models on your private network
- Colocation and edge computing
- 5x5 hardware or hardware you own
- Backup and recovery

The network behind it

- Dedicated internet access
- Managed firewall/router
- Secure remote access
- Network monitoring and 24/7 support

One team

- Internet, cybersecurity and AI from one provider
- 24/7 US-based support
- First reply within 60 minutes

How it works

Free IT consultation

We look at what you want AI to do and where your data lives, and share general recommendations.

Agree on the setup

A plan covering location, hardware and what we manage, set out in your service agreement.

Running and supported

We set up and secure the systems, monitor them and support you 24/7.

Book a free IT consultation

Tell us what you want AI to do. We ask a few questions and share general recommendations.
