Solution brief · Fiber backbone for building owners

A fiber backbone for new and existing buildings

The fiber backbone is what makes every 5x5 service in your building possible. We install backbones in new and existing buildings, own and manage our own, and manage backbones the building owns.

Why buildings choose 5x5

New and existing buildings

Most buildings already exist and most tenants have already moved in, so we install backbones in existing buildings as well as new ones.

Ours or yours

5x5 owns and manages its own backbone, and also manages backbones the building owns.

Everything runs on it

The backbone carries tenant services and Wi-Fi throughout the building. US-based support team. First reply within 60 minutes.

What we provide

What it makes possible

- Tenant internet and voice
- Building-wide Wi-Fi
- Connected Square Footage™
- First Connect move-in ready suites
- One secure network for building systems

Two ways to own it

- A 5x5-owned backbone, managed by 5x5
- A building-owned backbone, managed by 5x5

For every building

- New construction
- Existing buildings
- Full building network management
- 24/7 US-based support

How it works

Survey and plan

Review the property, existing infrastructure and service needs to develop an installation plan.

Install the fiber backbone

Install and connect the fiber backbone according to the agreed plan for the building.

Test and activate

Test connectivity, commission the network and prepare it for the agreed tenant and building services.

Bring 5x5 to your building

Tell us about your property, new or existing, and we will plan the backbone with your team.
