5×5 TELECOM
INTERNET, CYBER, EDGE AI & MANAGED SERVICES

Solution brief · OT managed services

Industrial networks that stay connected, secure and running

We bring ISP-grade connectivity and MSP-grade management to critical infrastructure, from the plant floor to the substation, so your operations stay online and protected.

The IT/OT divide

Downtime risks

When a line, pump station or control system loses its network, work stops.

Resilient fiber backhaul, managed SD-WAN, 24/7 NOC/SOC monitoring and uptime SLAs tied to your production goals.

Legacy vulnerabilities

Controllers, HMIs and sensors run for years on software that can't be patched like an office computer.

Continuous asset discovery, NIST-aligned threat monitoring, segmentation and rugged hardware lifecycle management.

Air-gap breakdowns

Once-isolated OT networks now connect to business systems, the cloud and outside vendors.

Segmentation between IT and OT, secure vendor remote access and one team responsible for both sides.

Core OT pillars

Industrial connectivity

- Managed SD-WAN for remote facilities
- Resilient fiber backhaul
- Ruggedized private cellular and IoT routing

OT cybersecurity and compliance

- Continuous asset discovery
- Threat monitoring aligned with the NIST framework
- Network segmentation
- Secure remote access for third-party vendors

24/7 co-managed operations

- Proactive monitoring from our unified NOC/SOC
- Lifecycle management of ruggedized hardware
- Uptime SLAs tied to physical production goals

Built for your industry

Manufacturing

Segment PLCs, HMIs and robotics, and give machine builders secure remote access.

Utilities and energy

Link substations and remote sites with SD-WAN and private cellular routing.

Smart facilities

Keep building systems connected, monitored and separate from tenant traffic.

Logistics and fleet

Connect warehouses, yards and vehicles with rugged cellular and IoT routing.

Book a free OT infrastructure consultation

We look at your industrial network, connections and remote access, ask a few screening questions and share general recommendations.
